HYPOTHESIS:

Which Cities Offer the Best Basement Value?

Properties located in South King County municipalities, specifically Auburn, Kent, and Federal Way, exhibit a significantly higher 'Basement Efficiency' ratio (basement square footage per dollar spent) compared to the overall King County average.

$$\text{Basement Efficiency} = \frac{\text{Basement Sqft}}{\text{Price}}$$

OBJECTIVE:

To identify where we get the maximum underground utility for every dollar spent. Our organization requires space for storage and operations that remains out of sight.

KEY FINDING:

As shown in the bar chart, SeaTac, Auburn, and Federal Way dominate the efficiency rankings. These South King County cities offer significantly more basement square footage per dollar compared to the regional average.

STRATEGIC TAKEAWAY:

These locations should be our primary targets for bulk equipment storage and laboratory setups where space and cost-efficiency are paramount.

HYPOTHESIS:

The "Stealth/Privacy" Cluster

There is a high density of 'Stealth Properties' in the suburbs, which allows for large-scale operations without surveillance risk."

OBJECTIVE:

To provide maximum physical privacy. We defined these targets using strict data parameters: massive lots to provide a physical buffer zone from neighbors, combined with a zero "view" and zero "waterfront" score to ensure the property remains unremarkable.

KEY FINDING:

When we filtered the market for these exact stealth parameters, the data revealed massive, dense clusters of these properties located almost exclusively in the suburban outskirts.

STRATEGIC TAKEAWAY:

By targeting these outskirts stealth clusters the organization does not have to compromise on operational size to remain hidden.

Top 5 Cities for 'Stealth' Operations (Large/Private Lots):

city

Bellevue 57

Issaquah 34

Seattle 30

Redmond 28

Sammamish 24

Name: count, dtype: int64

HYPOTHESIS:

THE RENOVATION LAUNDERING TARGET

OBJECTIVE:

Prove that Condition 2 properties offer the lowest entry price-per-square-foot making them the ideal vessel for cash-heavy renovation projects where maximum capital can be injected.

KEY FINDING:

Condition 2 properties have the lowest median price at ~\$191/sqft even lower than Condition 1 teardowns. They are structurally sound yet dilapidated enough to justify massive renovation budgets.

STRATEGIC TAKEAWAY:

Condition 2 is the 'sweet spot.' Acquire at lowest cost-per-sqft, inject large cash sums as renovation capital, and exit with a fully legitimized, high-value real estate asset.

Price per Sqft by Condition (Identifying Value-Add Targets)

HYPOTHESIS: THE HIGH-CAPACITY SAFE HOUSE

Specific outskirts zip codes in the southern region, particularly Renton, provide the highest concentration of 'High-Capacity' operational hubs at below-market prices, satisfying our need for 4 or more bedrooms and 1,000+ square foot basements

The goal is to find multiple properties in one area so the client can buy 4–5 houses discreetly

After filtering the data, the top zip code is WA 98058 (Renton). There are 5 suitable houses, which is enough to meet the client's requirement. Other outskirts zip codes have fewer options but could serve as backup locations

WHY THIS WORKS

- The hub has enough houses to buy 4-5 properties at once
- Locations are quiet outskirts, keeping the purchases low-profile
- Using zipcode-level clusters helps plan efficiently and reduces risk
- Next, the client can prioritize top hubs like WA 98058 and secondary hubs later

This strategy ensures maximum storage space per dollar spent while staying discreet

METHODOLOGY

1. Filtered dataset for:

- grade between 5 and 7
- condition equal to 3 or 4

2. Calculated Price per Square Foot (PPSF)
$$\text{PPSF} = \text{Price} / \text{sqft_living}$$

3. We computed a “basement ratio”
= basement homes / total homes.

4. We classified zip codes into:

- Urban: high number of listings
- Suburban: low number of listings

5. We compared the average basement ratio between the two groups.
